

DAY WATERWALL

The Glass Water wall defines one of two pathways into the Al Wasl Garden, offering a unique sense of transparency, and an illusion of massive blocks of glacial ice in the desert.

SUNSET FOUNTAIN

The water skin is a calm surface that reflects the grandeur of the space and structure. Aerated columns rise in a circular array, framing the central fountain, and evoking travel and exploration into the garden.

NIGHT WATERWALL

The Stone Water wall defines the second discovery pathway into the garden, offering a dynamic aesthetic to the space with a sense of solid texture and familiar, regional materials.

CENTRAL FOUNTAIN

This immersive interactive feature combines innovation, nature and beauty. Reflective water scrims morph in patterns. Dynamic dancing jets produce an evolving experience throughout the day, integrating lighting choreography at night.

CASCADING FOUNTAIN

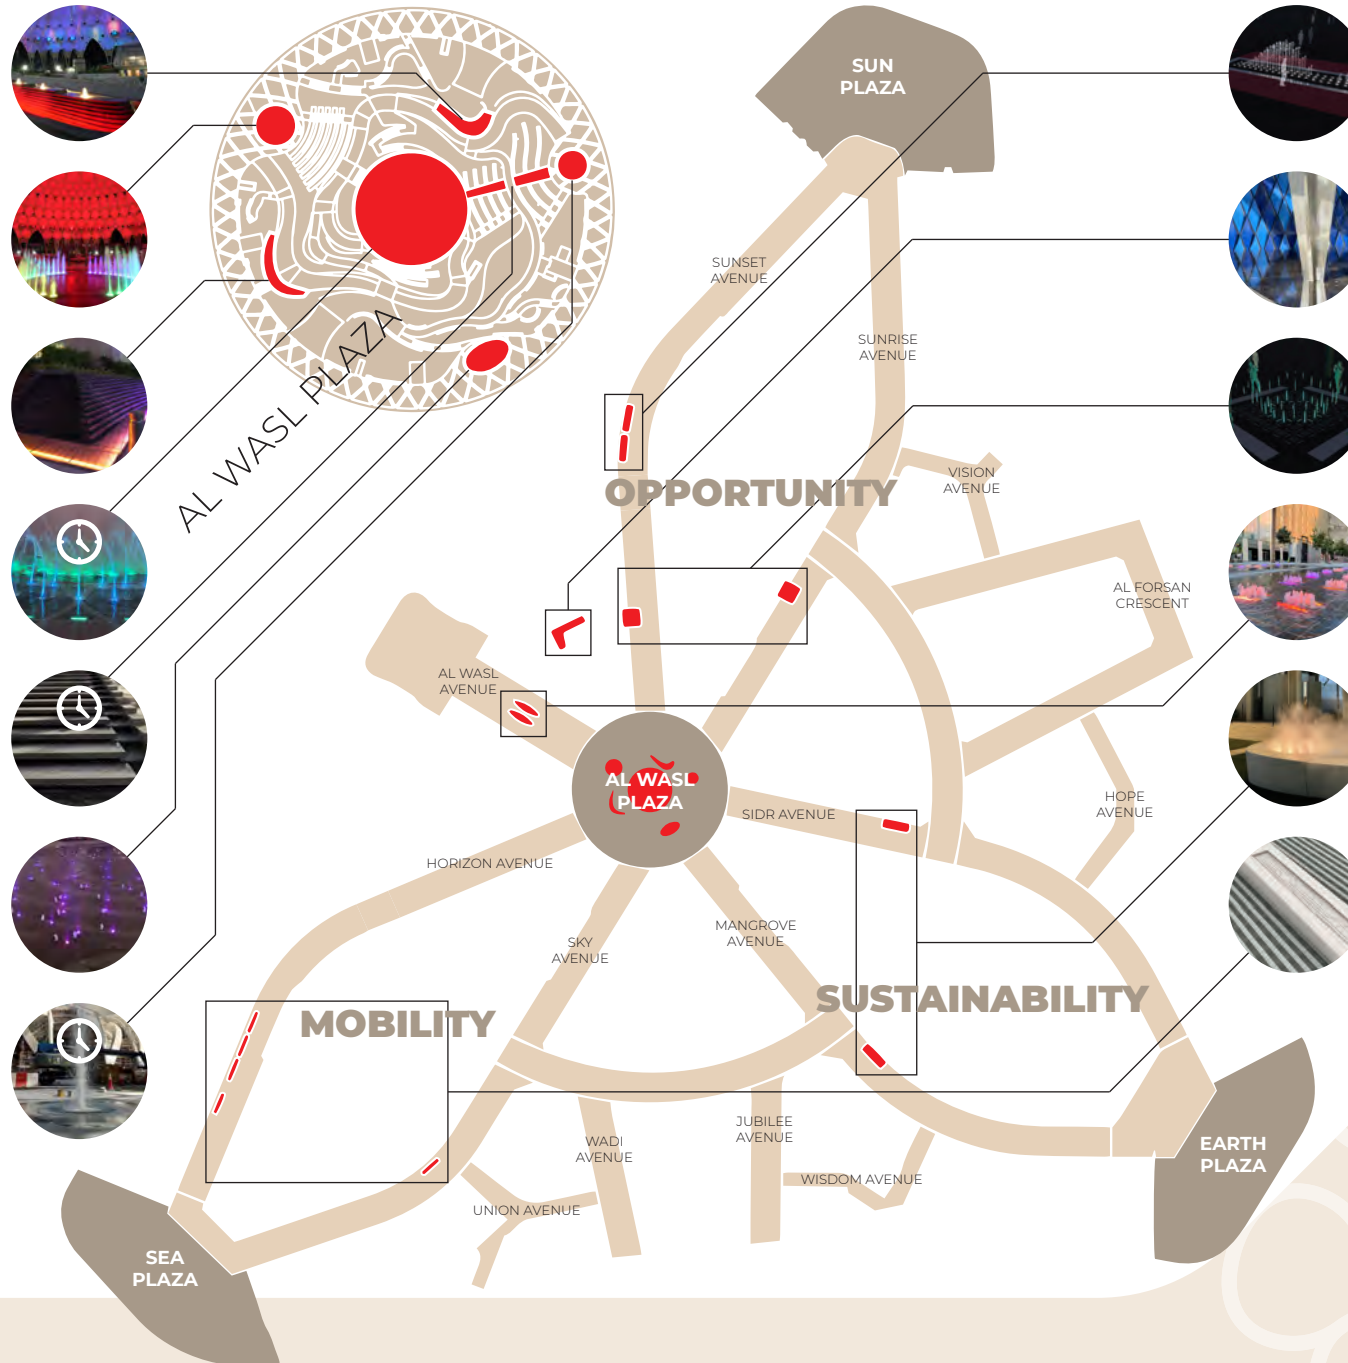

The grand staircase descends to the central garden, accentuated with cascading water steps and integrated LED lights. As patrons descend, they see, feel and hear the water around, allowing reconnection with nature.

MOONLIGHT FOUNTAIN

Subtle bubbling jets in the infinity pool generate concentric rings and dynamic patterns. These entice children and toddlers to play within. Sequenced LED pin lights provide a twinkly star canvas during night.

SUNRISE FOUNTAIN

This feature accents the gateway into the Al Wasl. Visitors are welcomed by a simple but impressive central column of water rising from a circular water scrim. This creates a beacon that draws people into the garden.

WATER MIRROR

This fun zone of fountain jets use height recognition effects to mirror each person or groups motion with jet height activation, with immediate responsiveness.

LEADERSHIP FOUNTAIN

This elevated water table is a shallow water skin, reflecting a simple and calm image of the grandiose Pavilion trellis structure. LED light illumination accents the façade with caustic effects of the moving water.

EMIRATES INTERACTIVES

This fun zone of fountain jets use height recognition effects to mirror each person or groups motion with jet height activation, with immediate responsiveness.

AL WASL AVENUE FOUNTAIN

This interactive feature is on the way into Expo. It consists of two elliptical waterskins reflecting the surrounding architecture. When no one is walking on it, it activates oscillating water arrays lit with hi fidelity LED technology.

GRAVITY MIST FOUNTAINS

Clouds of fog are challenged by gravity and add a visually stunning interactive experience, and shows how a simple fountain provides a cooling breeze during the hot weather, with minimal water use.

HYDROPHOBIC FOUNTAINS

Watch water droplets release and run in shallow grooves of Arabic script, using gravity and connecting a relay of high water velocity.

These water features will be active after the expo.
